Pierre Louis (1787-1872)
Inventor of the “numeric method” and the “method of observation”

Discovered in 1828 that patients who werebled early did worse than those who weren’t
• Died at a higher rate
• Those that survived, recovered earlier
The CAST Study

• Class I Antiarrhythmics: standard of care for asymptomatic ventricular arrhythmias in the 1980’s in the U.S.

• Cardiac Arrhythmia Suppression Trial: discovered in 1989 that patients who were treated did worse than those who weren’t.
HERS and Women’s Health

• Standard of care prior to 2000
  – Promotion of hormone replacement therapy for post-menopausal women

• HERS study, Women’s Health Initiative (2001, 2002)
  – Use of estrogen replacement therapy led to higher rates of cardiovascular complications, early in treatment.
Course Objectives

• To understand, appreciate and begin to develop tools that handle the uncertain world within which medical facts, attitudes and decisions reside.

• To understand that skills development in this domain require nurturing and continuous application over time (usually a lifetime).

• To ask questions.
Housekeeping: Grading

• Stated in the syllabus
• Assignments (30%)
• Attendance (20%) – Despite
• Final Exam (50%)
Housekeeping: Recommended Textbook

- Compiled from JAMA series
- Created and compiled by leaders in clinical epidemiology, biostatistics, medical decision-making and medical education
- An excellent reference tool for clinical practice
- Will be referred to during all 4 years of medical school

Online: [www.lib.umich.edu](http://www.lib.umich.edu)
Search: JAMAEvidence under “Databases”
Added help

• Joel Purkiss, PhD - Office of Medical Student Education
• Available to provide help on an as needed basis during the month.
• Will have MDM Office Hours on August 22 and August 23 in the afternoons
Learning Objectives for Today

• By the end of this lecture, you will…
  – summarize how new medical knowledge is created and applied
  – describe how common diagnostic testing can lead to uncertainty in diagnostic reasoning
  – summarize how uncertainty in diagnostic reasoning interacts with trust of the practitioner.
Thread 1: Information Retrieval
Lec – Mon 8/8
Computer
Session 1
Session 2
Fri and
8/19, 22
or 8/23
Computer Session #1 - Optional Friday, August 5

• Available by signup (outside lecture hall)
• Informed Consent (what we will cover)
  – Introduction to Information Resource environment
    • E-Books
    • E-Journals
  – Basic MEDLINE searching (PubMed and OVID)
• Online demo modules available (see handout linked to the computer session on the portal)
• KEY - Still must complete Assignment #1 and bring to Computer Session #2 (Aug 19, 22 or 23)
Thread 1: Information Retrieval
Lec – Mon 8/9
Computer
Session 1
Session 2
Fri and 8/23 or 8/24

Thread 2: Clin Epi, Biostats, Public Health
Lec (Fri) and Lecs (Mon and Tues)
SG 1 (8/11)

Thread 3: Diagnostic Reasoning
Lecs (8/15)
SG 2 (8/16) and SG 3 (8/24)
An Analogy to provide relevance
The Odyssey: A Tale

• The case: A 1998 Honda Odyssey with 68,000 miles, no significant past maintenance history, presents with a buzzer problem.

• Description of the problem: When driving, even when all doors and the trunk are closed, the door ajar buzzer (but not light) sometimes comes on. Only turning off the automatic sliding side door control will turn off the buzzer.
The Odyssey: Mechanic Intake

• He asks you about other things you may have noticed about the car.

• Other symptoms:
  – Trunk latch sometimes stuck in the past, not now (active recall on the latch)
  – Automatic side door control replaced as per recall 2 years ago.
The Odyssey: First steps

• What is the mechanic thinking?
  – He generates a *differential diagnosis*
  – Series of possibilities

  #1: Trunk latch defect (recall pending)
  #2: Ajar sensing defect on side door
  #3: Side door not closing properly
The Odyssey: First Steps

• What does the mechanic tell you?
  – The most likely problem is the trunk latch. It is under recall anyways, so let’s fix it.

• What does he do?
  – He replaces the trunk latch. He drives your car, and notices no triggering of the buzzer.

• What are the potential problems with his reasoning?
The Odyssey: First Steps

• Diagnostic reasoning defects
  – failure to entertain all possibilities, tendency to do what’s convenient
  – failure to elicit and pay careful attention to description of symptoms
  – failure to perform specific diagnostic tests
  – failure to inform customer

availability, problem representation, anchoring, description detail, order effects*
The Odyssey: What happens next

• One hour after driving the minivan, the inappropriate buzzer returns.

• Place yourself in my position:
  – What do I do next?
  – Do I return to the mechanic?

I turn around and go back…
TOOLS

MATH AHEAD
First…A Clinical Tale

- 20 year-old woman presents for genetic testing
- Mother had breast and ovarian cancer, likely has the BRCA gene (autosomal dominant)
- With this assumption, the patient’s likelihood of having the gene is…
Diagnostic Reasoning: Probabilistic Reasoning

**Probability**: The likelihood of the occurrence of an event.

- $P(X) =$ the probability of event $X$

- $P(BRCA) =$ the probability that a patient carries the BRCA gene
Prior Probabilities

• Based on many factors:
  – Clinician experience
  – Patient demographics
  – Characteristics of the patient presentations (history and physical exam)
  – Previous testing
  – Genetic knowledge (in this case)

• \( P(BRCA) = 50\% \)
THE STORY CONTINUES…

MATH AHEAD
The Tale Continues…FFwd

• At age 75 she has not been diagnosed with breast or ovarian cancer.
• For next lecture (Monday) think about:
  – Is her probability of having the BRCA gene different at age 75 than it was at age 20?
  – If yes, is it higher or lower?

…to be continued…
