

Assignment:

Your group has \$10,000,000 to spend within the next five years in a sub-Saharan country to address the Millennium Development Goals of "Reduce Child Mortality," "Improve Maternal Health," and "Combat HIV/AIDS, Malaria, & Other Disease." The specific country does not matter, just assume that it faces all the issues raised in the MDG document.

- Allocate that money across one to all five of potential areas listed below.
 - What percentage to healthcare worker and public health education?
 - What percentage to vaccination programs?
 - What percentage to retroviral drugs?
 - What percentage to malaria nets and other malaria prevention programs?
 - What percentage to clean water and sanitation system programs?
- In any that you select, indicate the "SI-angle" to the effort. That is, what particular expertise would SI faculty, students, and graduates bring to such an area?
- Briefly discuss why you made the allocation the way you did, thinking about such issues as scale, sustainability, ethics, efficacy, etc.
- There is no right or wrong answer to the allocation, it's your justification that matters.

Goal is about two pages, single spaced per group. Email to Ted by Saturday 3/14/09 at midnight with the names of the group members in the document.
