Make Your Own Assessment

{ Content Open.Michigan believes can be used, shared, and adapted because it is ineligible for copyright. }

Public Domain – Ineligible: Works that are ineligible for copyright protection in the U.S. (17 USC § 102(b)) *laws in your jurisdiction may differ

{ Content Open.Michigan has used under a Fair Use determination. }

Fair Use: Use of works that is determined to be Fair consistent with the U.S. Copyright Act. (17 USC § 107) *laws in your jurisdiction may differ

Our determination **DOES NOT** mean that all uses of this 3rd-party content are Fair Uses and we **DO NOT** guarantee that your use of the content is Fair.

To use this content you should **do your own independent analysis** to determine whether or not your use will be Fair.

Experimental Analysis of Precipitation Data of Different Metal Ions

Investigate possible links between precipitation and ion characteristics.

- You will look at different reactions in order to determine if precipitation is predictable based on the periodic table.
- It is the objective to determine if a trend emerges as you look at different cations that are in the same family as well as the same period.

[http://www.youtube.com/watch?v=mHpk2Uh9L9U&feature=player_embedded]

- You will have to take into account what kind of properties (ion size, charge, etc) are seen in the periodic table among the different ions and associate that with how one ion would more likely to precipitate out compared to another.
