Make Your Own Assessment
{ Content Open.Michigan believes can be used, shared, and adapted because it is ineligible for copyright. }

Public Domain – Ineligible: Works that are ineligible for copyright protection in the U.S. (17 USC § 102(b)) laws in your jurisdiction may differ

Fair Use: Use of works that is determined to be Fair consistent with the U.S. Copyright Act. (17 USC § 107) laws in your jurisdiction may differ

Our determination DOES NOT mean that all uses of this 3rd party content are Fair Uses and we DO NOT guarantee that your use of the content is Fair.
To use this content you should do your own independent analysis to determine whether or not your use will be Fair.
This lesson was designed to introduce students to the stereotypes and common misconceptions about science.

**Engagement:** Draw a scientist!

Students are given time to draw what they think a scientist looks like. They are encouraged to include details such as where the scientist is, what the scientist is doing, etc.

**Exploration:** What similarities and differences can we see between our scientists?

Discuss what common characteristics are seen in the drawings.

- How many people drew a male scientist? A female scientist?
- How many scientists have crazy Einstein-like hair? Glasses?
- How many scientists are wearing lab coats and goggles?
- How many scientists are working in a lab with chemicals and beakers?

**Explanation:** Dissecting the scientist.

As a group, discuss these observations.

- What do these observations suggest about prevalent misconceptions?

**Elaboration:** Understanding the diversity of science.

Think about what aspects of science may be obscured by these stereotypes.

- What can be considered science?
- What are components of science are commonly overlooked?

**Evaluation:** (Re)Draw a Scientist [optional]

Have students redraw a scientist, taking into consideration the class discussion.

- In what ways did the drawings change?
- In what ways did the drawings stay the same?
