Assignment 5 - Figuring out who has the most commits

Due Date: Friday February 13, 2009 at 11:50PM

This program reads through a mail log, and figures out who had the most messages in the file.

The program looks for From lines and takes the second parameter on those lines as the person who sent the mail.

The program creates a Python dictionary that maps E-Mail address to the total number of messages for that person.

After all the data has been read - the program looks through the dictionary to find who has the most Mail messages and how many messages the person has.

```
$ python whomost.py
Enter a file name: mbox-short.txt
cwen@iupui.edu 5
$ python whomost.py
Enter a file name: mbox.txt
zqian@umich.edu 195
```

First, make your program so that it recovers when the user types a bad file name – and when the user simply presses enter at the file name – assume mbox-short.txt – here is some sample code:

```
fname = raw_input("Enter file name:")
if len(fname) == 0 :
    print "Assuming mbox-short.txt"
    fname = "mbox-short.txt"
try:
    infile = open(fname, "r")
....
```

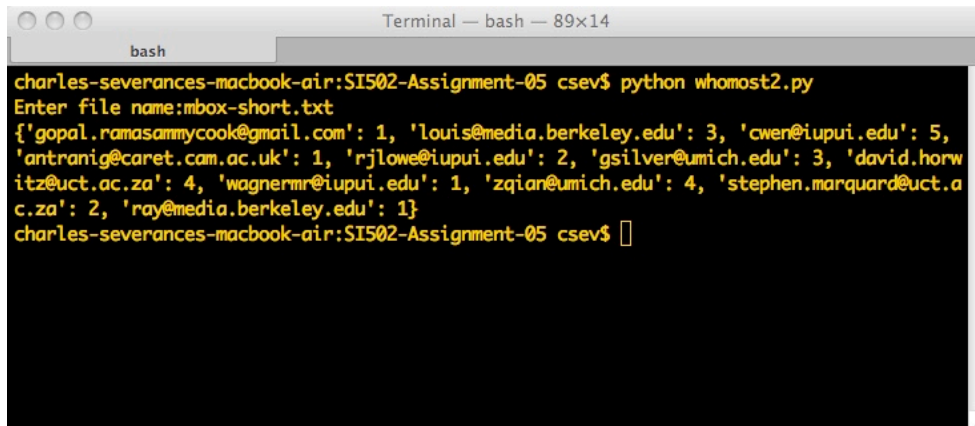

You are to turn in three programs source code and a screen shot of each of the programs running:

- The first program simply prints out the dictionary contents at the end of the program. Don't worry about making it pretty – just print out the dictionary. To do this you will need to make a dictionary and each time you see a new e-Mail address add an entry to the dictionary – and when you already have an entry for the address in the dictionary – you add one to the count.
- The second program simply prints out the E-Mail addresses as they are encountered in the file and prints out the current total of the messages seen so far for each person.

- The third program simply prints the name and number of commits of the person who has the most commits. The program does not print anything else out.

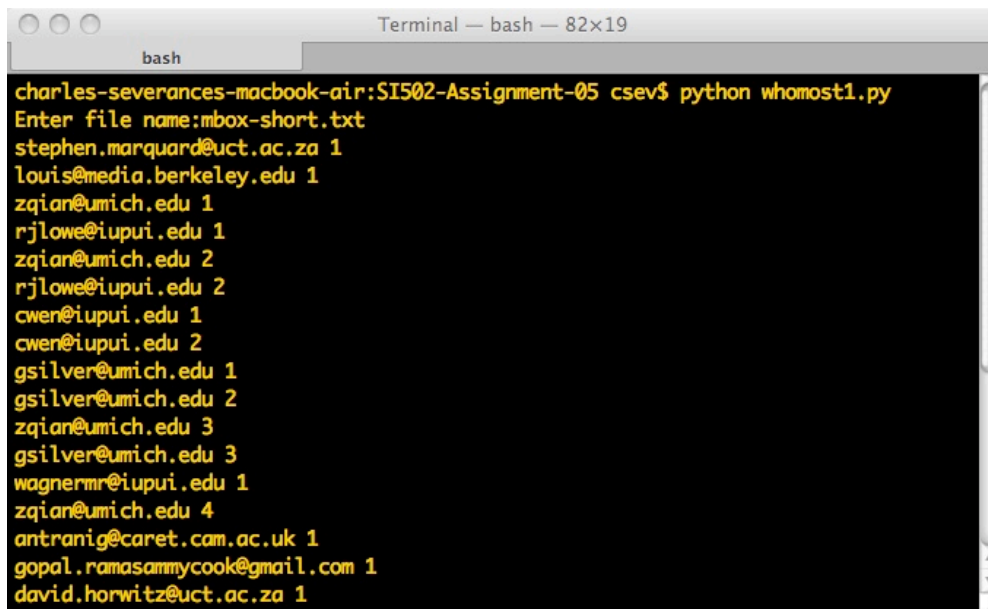

Turn in

For this assignment turn in all three Python programs and three screen shots of the programs running. Sample screen shots below:

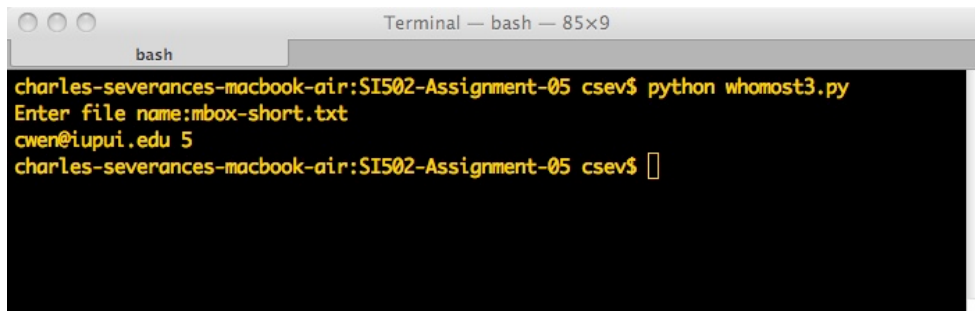

```
Terminal — bash — 89x14
bash
charles-severances-macbook-air:SI502-Assignment-05 csev$ python whomost2.py
Enter file name:mbox-short.txt
{'gopal.ramasammycook@gmail.com': 1, 'louis@media.berkeley.edu': 3, 'cwen@iupui.edu': 5,
'antranig@caret.cam.ac.uk': 1, 'rjlowe@iupui.edu': 2, 'gsilver@umich.edu': 3, 'david.horwitz@uct.ac.za': 4, 'wagnermr@iupui.edu': 1, 'zqian@umich.edu': 4, 'stephen.marquard@uct.ac.za': 2, 'ray@media.berkeley.edu': 1}
```
