## Use + Share + Adapt

{ Content the copyright holder, author, or law permits you to use, share and adapt. }

**Public Domain – Government:** Works that are produced by the U.S. Government. (17 USC § 105)

**Public Domain – Expired:** Works that are no longer protected due to an expired copyright term.

**Public Domain – Self Dedicated:** Works that a copyright holder has dedicated to the public domain.

**Creative Commons – Zero Waiver**

**Creative Commons – Attribution License**

**Creative Commons – Attribution Share Alike License**

**Creative Commons – Attribution Noncommercial License**

**Creative Commons – Attribution Noncommercial Share Alike License**

**GNU – Free Documentation License**

## Make Your Own Assessment

{ Content Open.Michigan believes can be used, shared, and adapted because it is ineligible for copyright. }

**Public Domain – Ineligible:** Works that are ineligible for copyright protection in the U.S. (17 USC § 102(b)) \*laws in your jurisdiction may differ

{ Content Open.Michigan has used under a Fair Use determination. }

**Fair Use:** Use of works that is determined to be Fair consistent with the U.S. Copyright Act. (17 USC § 107) \*laws in your jurisdiction may differ

Our determination **DOES NOT** mean that all uses of this 3rd-party content are Fair Uses and we **DO NOT** guarantee that your use of the content is Fair.

To use this content you should **do your own independent analysis** to determine whether or not your use will be Fair.

# SI 675 Digitization for Preservation

Week 7 – Metadata for Image Objects

# Outline

---

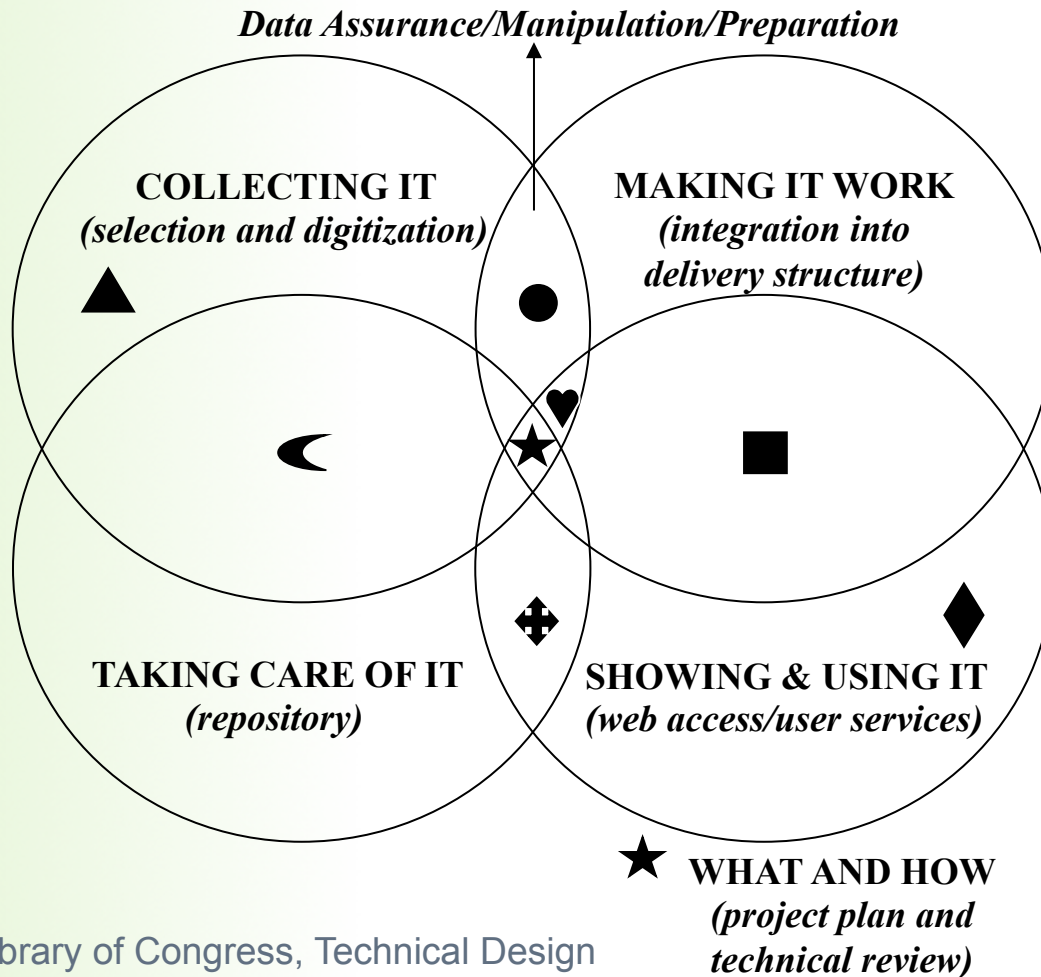

- ▶ Managing a digitization program - debrief
- ▶ Metadata for images
- ▶ File formats

Yad Vashem and Google Partner to Preserve and Share Holocaust Archives:

<http://www.yadvashem.org/>

Search on Yecheskel Fleischer

# Aspects of Digital Collection Creation and Maintenance

## ROLES

★	<i>Production Coordinator</i> <i>Technical Review Group</i>
▲	<i>Content Custodian</i> <i>Conservator</i> <i>Capture Specialist</i> <i>Copyright Researcher</i>
♥	<i>Data Wrangler</i>
●	<i>Description Creator</i> <i>Quality Assurance Specialist</i> <i>Editor</i>
■	<i>Applications Developer</i>
◆	<i>Graphic Interface Designer</i>
⊕	<i>Systems Engineer</i>
☾	<i>Digital Custodian</i>

Library of Congress, Technical Design  
Review Group, November 2001

# Applying Standards in Practice

---

- ▶ **Analogy: pieces of a complex puzzle**
  - ▶ Edge pieces provide a framework
  - ▶ Connections among similar functions and concepts
  - ▶ Still some missing pieces, but not so many that the overall picture can't be discerned
- ▶ **Standards issues range from well-defined to unknown**
  - ▶ Product of digitization increasingly standardized
  - ▶ Matching standards to workflow fairly well understood
  - ▶ Impact of decision making marginally clear
  - ▶ User requirements not well understood
- ▶ **Preservation: from replacement to transformative use**

# Metadata Functions in Digitization

---

- ▶ Describe objects
  - ▶ Original, surrogate
- ▶ Structure relationships
  - ▶ Internal sequencing
  - ▶ External context
- ▶ Manage life cycle
  - ▶ Origins, rights
  - ▶ Technical characteristics
  - ▶ Preservation (changes)
  - ▶ Location

# Metadata Standards

---

- ▶ Making of America II
  - ▶ Descriptive [about object & source]
  - ▶ Structural [internal & external]
  - ▶ Administrative [technical + preservation]
- ▶ Library of Congress – Standards Development Office
  - ▶ <http://www.loc.gov/standards/>
- ▶ Metadata for digital content (2009)
  - ▶ Descriptive elements for bitmaps
  - ▶ <http://www.loc.gov/standards/mdc/elements/>

# Metadata for Image Collections

---

- ▶ Dublin Core is minimum for description
  - ▶ <http://dublincore.org/>
- ▶ Technical and administrative metadata are in a state of flux
  - ▶ MIX
  - ▶ PREMIS and METS record
  - ▶ Specialized, local metadata schemas

# Technical Metadata for Images

---

## ► Origins:

- *Automatic Exposure: RLG-led initiative to promote technical metadata*
  - <http://www.oclc.org/research/activities/past/rlg/automaticexposure/default.htm>
- *NISO Z39.87: Data Dictionary—Technical Metadata for Digital Still Images*  
[http://www.niso.org/kst/reports/standards?step=2&gid=None&project\\_key=b897b0cf3e2ee526252d9f830207b3cc9f3b6c2c](http://www.niso.org/kst/reports/standards?step=2&gid=None&project_key=b897b0cf3e2ee526252d9f830207b3cc9f3b6c2c)
- See handout of metadata elements

## ► MIX: Metadata for Images in XML...

- <http://www.loc.gov/standards/mix/>

## ► Uses: Harvard JHOVE

- Detects formats and assesses how well they conform to standards
- [JHOVE - JSTOR/Harvard Object Validation Environment](#)

# ANSI/NISO Z39.87-2006 – Object Identifier

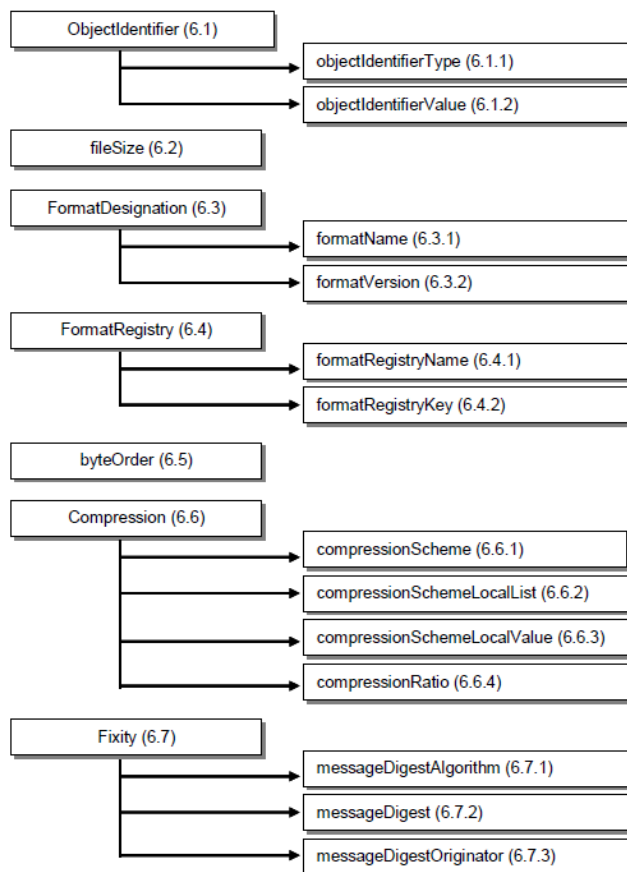

Figure 1: Logical structure of basic digital object information

## 6.3.1 formatName

<b>Definition</b>	<i>a data element that designates the format name or description of the file format</i>
<b>Type</b>	string
<b>Obligation</b>	M
<b>Repeatable</b>	N
<b>Values (Examples)</b>	image/jp2 image/geotiff Adobe PDF base64
<b>Notes</b>	This data element is drawn from the PREMIS data element set. Values should be taken from a controlled vocabulary. It is permissible to either list proper format names (e.g., "Adobe PDF") or MIME types (e.g., "image/tiff" or "image/jp2")
<b>Use</b>	Manager System User

# ANSI/NISO Z39.87-2006 – Basic Characteristics

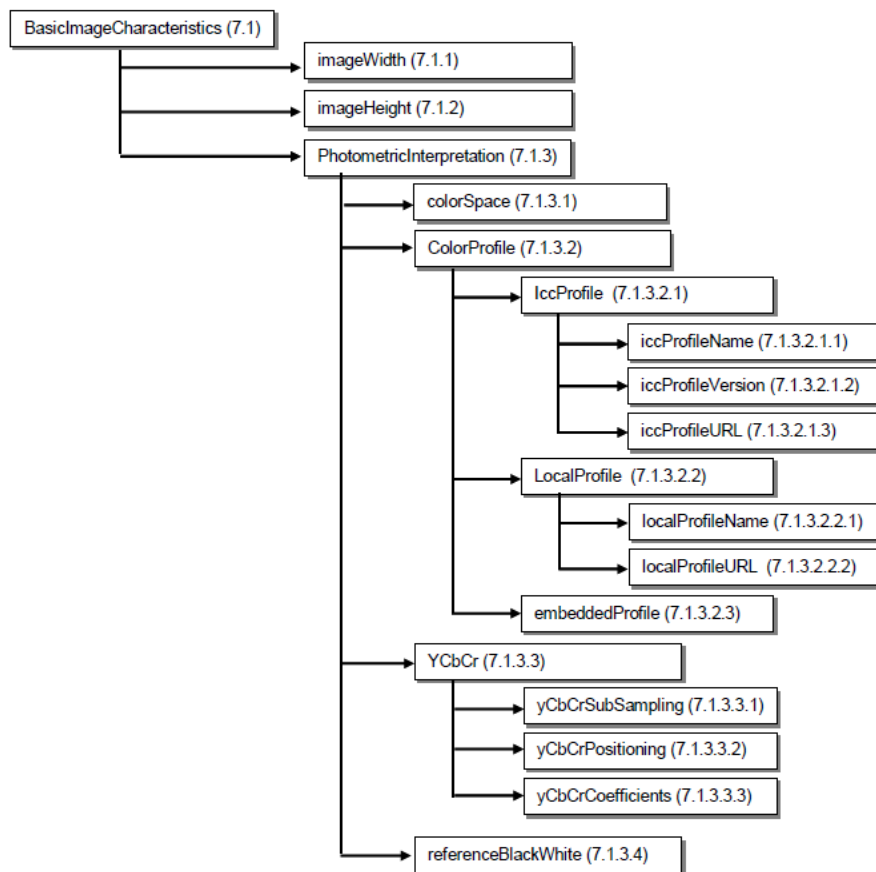

Figure 2: Logical structure of BasicImageCharacteristics

## 7.1.2 imageHeight

<b>Definition</b>	<i>a data element that specifies the height of the digital image, i.e. vertical or Y dimension, in pixels</i>
<b>Type</b>	positive integer
<b>Obligation</b>	M
<b>Repeatable</b>	N
<b>Values (Examples)</b>	2130 1200
<b>Notes</b>	<p>The image height may be the shorter or longer dimension of the image, depending upon the orientation of the camera or scanner during image capture. For multiple-resolution image file formats, value shall specify the highest resolution.</p> <p>This field may be used to calculate 9.1.2.2 <b>ySamplingFrequency</b> when 8.1.3.2.2 <b>sourceYDimensionUnit</b> is in inches and 9.1.2 <b>samplingFrequencyUnit</b> = 2.</p> <p>Formula to calculate <b>ySamplingFrequency</b>:</p> $ySamplingFrequency = imageHeight / sourceYDimension$
<b>Use</b>	<p>System (required field for image viewers [size])</p> <p>Manager (one of the quantitative metrics to evaluate image quality)</p> <p>User</p>

# ANSI/NISO Z39.87-2006 – Source Info

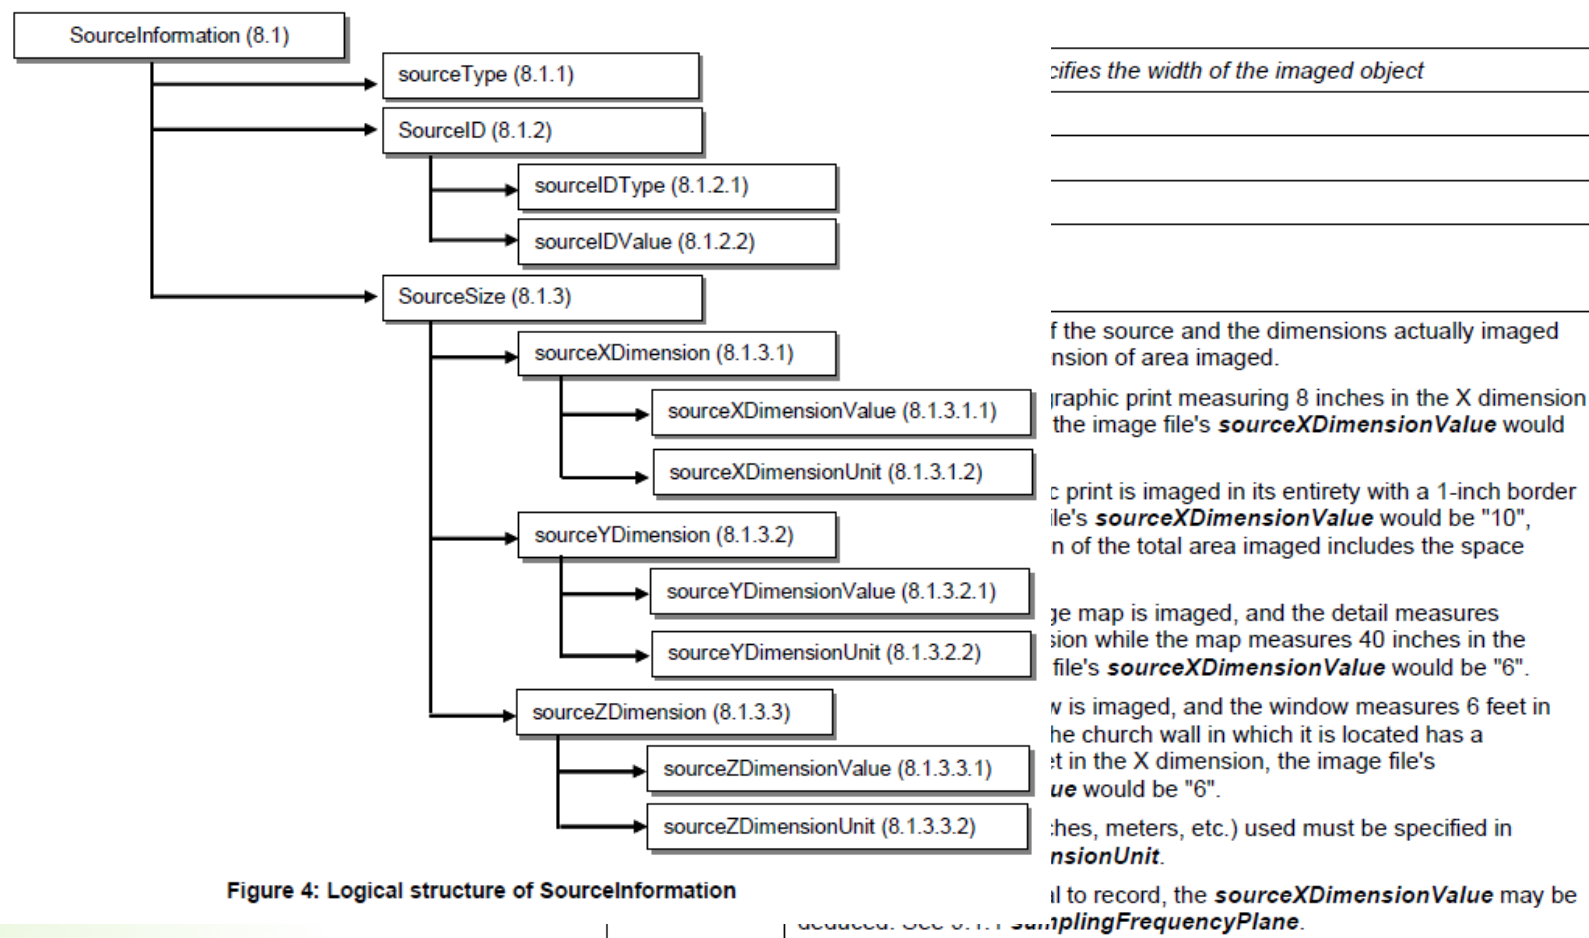

Figure 4: Logical structure of SourceInformation

specifies the width of the imaged object

of the source and the dimensions actually imaged  
n of area imaged.

graphic print measuring 8 inches in the X dimension  
the image file's **sourceXDimensionValue** would

c print is imaged in its entirety with a 1-inch border  
le's **sourceXDimensionValue** would be "10",  
n of the total area imaged includes the space

ge map is imaged, and the detail measures  
sion while the map measures 40 inches in the  
file's **sourceXDimensionValue** would be "6".

v is imaged, and the window measures 6 feet in  
he church wall in which it is located has a  
t in the X dimension, the image file's  
**ue** would be "6".

ches, meters, etc.) used must be specified in  
**n sionUnit**.

il to record, the **sourceXDimensionValue** may be  
duced. See 8.1.1 **SamplingFrequencyPlane**.

# MIX: Metadata for Images in XML

- ▶ MIX Schema Version 2.0 (current version)
  - ▶ Implements ANSI/NISO Z39.87 – 2006
  - ▶ Standard maintained by Library of Congress
  - ▶ <http://www.loc.gov/standards/mix/>

```
<xsd:schema targetNamespace="http://www.loc.gov/mix/v20"
  xmlns:xsd="http://www.w3.org/2001/XMLSchema"
  xmlns="http://www.loc.gov/mix/v20"
  elementFormDefault="qualified"
  attributeFormDefault="unqualified"
  >

<xsd:element name="mix">
  <xsd:annotation>
    <xsd:documentation>NISO Data Dictionary Technical Metadata for Digital Still Images (May 1, 2006)</xsd:documentation>
  </xsd:annotation>
  <xsd:complexType>
    <xsd:complexContent>
      <xsd:extension base="mixType"/>
    </xsd:complexContent>
  </xsd:complexType>
</xsd:element>
```

**NISO Metadata for Images in XML Schema**

Official Web Site

# MIX Code for Z39.87 – 7.1.2 Image Height

ANSI/NISO “Container” = MIX “complexType” with “elements”

```
<!-- BasicImageInformationType -->
<xsd:complexType name="BasicImageInformationType">
  <xsd:sequence>
    <xsd:element name="BasicImageCharacteristics" minOccurs="1" maxOccurs="1">
      <xsd:annotation>
        <xsd:documentation>NDD id="7.1"</xsd:documentation>
      </xsd:annotation>
      <xsd:complexType>
        <xsd:sequence>
          <xsd:element name="imageWidth" type="positiveInteger" minOccurs="1" maxOccurs="1">
            <xsd:annotation>
              <xsd:documentation>NDD id="7.1.1"</xsd:documentation>
            </xsd:annotation>
          </xsd:element>
          <xsd:element name="imageHeight" type="positiveIntegerType" minOccurs="0" maxOccurs="1">
            <xsd:annotation>
              <xsd:documentation>NDD id="7.1.2"</xsd:documentation>
            </xsd:annotation>
          </xsd:element>
        </xsd:sequence>
      </xsd:complexType>
    </xsd:element>
  </xsd:sequence>
</xsd:complexType>
```

```
<!-- NISO Section 7 -->
- <BasicImageInformation>
  - <BasicImageCharacteristics>
    <imageWidth>400</imageWidth>
    <imageHeight>200</imageHeight>
  - <PhotometricInterpretation>
    <colorSpace/>
  - <ColorProfile>
    - <IccProfile>
```

MIX 2.0: <http://www.loc.gov/standards/mix/mix20/mix20.xsd>

# i3a: International Imaging Industry Association

---

- ▶ IT 10: Electronic Still Picture Imaging
  - ▶ Picture Transfer Protocol
  - ▶ ISO 15740:2005
- ▶ International standard for exchange of images and metadata from 95% of cameras produced in the world.
  - ▶ One standard for USB
  - ▶ One standard for TCP/IP
- ▶ Platform independent
  - ▶ Windows Media Transport Protocol; Mac OS X; Linux

# MIX Uses

---

- ▶ **Adobe Extensible Metadata Platform (XMP)**
  - ▶ Modifies scanner control software for metadata capture
  - ▶ Example: PhotoShop “File Info...”
  - ▶ <http://www.adobe.com/products/xmp/overview.html>
  
- ▶ **Harvard JHOVE**
  - ▶ Detects formats and assesses how well they conform to standards
  - ▶ JHOVE - JSTOR/Harvard Object Validation Environment

# File Formats

---

- ▶ TIFF – Tagged Image File Format
  - ▶ <http://www.awaresystems.be/imaging/tiff/tifftags/baseline.html>
- ▶ PNG – Portable Network Graphics
  - ▶ ISO/IEC 15948
  - ▶ <http://www.libpng.org/pub/png/>
- ▶ JPEG 2000
  - ▶ <http://www.jpeg.org/jpeg2000/index.html>
- ▶ Benefits of JPEG 2000
  - ▶ <http://www.digitizationguidelines.gov/stillimages/presentations.html>

- ▶ Potential use cases for JHOVE include:
- ▶ Identification
  - ▶ "I have an object; what format is it?"
- ▶ Validation
  - ▶ "I have an object that purports to of format  $F$ ; is it?"
  - ▶ "I have an object of format  $F$ ; does it meet profile  $P$  of  $F$ ?"
  - ▶ "I have an object of format  $F$  and external metadata about  $F$  in schema  $S$ ; are they consistent?"
- ▶ Characterization
  - ▶ "I have an object of format  $F$ ; what are its salient properties (given in schema  $S$ )?"

JHOVE: <http://hul.harvard.edu/jhove/>

# Summary of Key Concepts

---

- ▶ Digitization can be a preservation strategy, under certain circumstances
- ▶ Digitization is representation of an artifact in digital form
  - ▶ Digital coding
  - ▶ Extensive overt and subtle decision making in workflow
- ▶ Digitization for preservation depends on developments in image science and evolving best practices
- ▶ Targets provide confidence that scanning equipment is performing to expectations
- ▶ Use of technical metadata is essential to support preservation goals

# Thank you!
