Module: Public Health Disaster Planning for Districts

Organization: East Africa HEALTH Alliance, 2009-2012

Author(s): Dr. Immaculate Nabukenya (MoH Uganda), Dr. Justine Lumaya (Yei Hospital), Ms. Christine Kanyandekwe (RALDA), Dr. Abdu Mohammed (MoH Ethiopia), Dr. Nlemba Mabela (MoH DRC), Dr. Julius Keyyu (Tanzania Wildlife Research Institute), Dr. Christina A.O. Othieno (Moi University), Dr. Terence Odoch (Makerere University), Dr. Robinson Mdegela (Sokoine University), Joel Buhinja (RALDA), Isaac Ntahobakulira (Rwanda)

Resource Title: Session 1.2b: Introduction to Epi-zoonotic Diseases

Make Your Own Assessment

{ Content Open.Michigan believes can be used, shared, and adapted because it is ineligible for copyright. }  

- **Public Domain – Ineligible**: Works that are ineligible for copyright protection in the U.S. (17 USC § 102(b)) *laws in your jurisdiction may differ

{ Content Open.Michigan has used under a Fair Use determination. }  

- **Fair Use**: Use of works that is determined to be Fair consistent with the U.S. Copyright Act. (17 USC § 107) *laws in your jurisdiction may differ

Our determination DOES NOT mean that all uses of this 3rd-party content are Fair Uses and we DO NOT guarantee that your use of the content is Fair. To use this content you should **do your own independent analysis** to determine whether or not your use will be Fair.
Introduction to Epi-zoonotic Diseases

Compiled by the Eastern Africa Disaster Management Training Core Team

Narrated by Dr. Roy William Mayega

11/10/2009
Session Outline

1) Terminology and Definitions
2) Zoonotic Diseases of Epidemic potential in Eastern Africa
3) Significance of Epi-zoonotics as Emerging Diseases
4) Factors Promoting emergence of Epi-zoonotic Diseases
5) Consequences of Epi-zoonotic diseases
6) General Response interventions
7) Animal welfare
Terminology and Definitions

• **A zoonosis** is a disease or infection which are naturally transmitted between animals and man (WHO, 1959)

• A simpler definition is a disease that normally infects animals, but can also infect humans

• **Examples of common zoonoses:** RVF, Rabies, Anthrax, Plague, Trypanosomiasis, Influenza, Ebola
Terminology and Definitions

• **An Epizootic** disease is an outbreak (epidemic) of disease in an animal population, e.g. rift valley fever

• **An Enzootic** is a disease that is endemic in animals, e.g. bovine TB

• **Exotic diseases** are those which are imported into a country in which they do not otherwise occur e.g. ‘bird flu’
Terminology and Definitions

- **Emerging and re-emerging zoonoses** are diseases caused either by totally new or partially new agents, or by micro-organisms previously known, but now occurring in places or in species where the disease was previously unknown (Meslin, WHO, 1992)

- Examples: Influenza, Ebola, SARS
Zoonotic Diseases of Epidemic Potential the Eastern Africa

• 1. Rift Valley Fever
• 2. Influenza A Viruses
• 3. Anthrax
• 4. Rabies
• 5. Ebola
• 6. Plague
• 7. Trypanosomiasis
Significance of Epi-zoonotics as Emerging Diseases

• Globally, there have been over 20 new diseases in the last 30 years (Jones et al, 2008)

• Over 2/3 of new disease causing agents arise from wild-life
  – Examples: SARS, Nipah, H5N1 and H1N1

• Domestic animals account for 20% of new zoonoses

• The East and Central Africa Region is a ‘hot spot’ for new diseases
Factors Promoting the Emergence of Epi-Zoonotic Diseases

• Socio-economic Factors
  – Intensive farming without bio-security measures
  – Water-supply projects
  – Urbanization
  – Human population movement
  – Animal movement
  – Famine
  – Free-range farming systems

• Environmental Factors
  – Climate change (e.g. global warming)
  – Presence of vectors and/or reservoirs
Factors Promoting the Emergence of Epi-Zoonotic Diseases

• **Human Health-related:**
  – Co-infection with other diseases agents (HIV, TB)
  – Lack of knowledge on bio-security measures
  – Inadequate personal hygiene e.g. sneezing without covering mouth, not washing hands

• **Cultural and behavioural risk factors:**
  – Lack of knowledge
  – Food habits
  – Changes in life-style
  – Human-Livestock-Wildlife interaction
The Human-Animal Interface

- Intense handling of animal products with low bio-security (Brucellosis, Anthrax, Avian Influenza, etc)

- Pastoralism and Free-range systems

- Hunting, gathering, eating game meat and carcasses (Ebola, Anthrax)

- Contact with bats (Ebola, Marburg)

- Ill cooked products (Salmonellosis, Brucellosis)
The Human-Animal Interface

- Hygiene, rats (Leptospirosis, Hepatitis E)
- Free-range poultry and migratory birds (Flu)
- Conservation areas (Ngorongoro, Samburu)
- Ill-handling of domestic canines (Rabies)
- Socio-cultural, sharing with animals
- Cross-border risk and gender related risk
Consequences of Epi-Zoonotic diseases

• What do you think are the Public Health and other Consequences of Epi-zoonotic Diseases
Socio-economic Impact of Epi-Zoonotic diseases

1. Reduction in the level of outputs from animal production
2. Reduction in perceived or actual output quality (e.g. food safety)
3. Waste of inputs to animal production (e.g. feed)
4. Resource costs of disease prevention and control
5. Negative animal welfare effects
6. International trade restrictions
Socio-economic Impact of Epi-Zoonotic diseases

1. Human health costs
2. Effects on the environment
3. Effects on tourism
4. Effects on rural livelihoods
5. Political and social disruption
6. Increased Poverty
Public Health Consequences of Epi-<n>zoonoses

• Increased deaths
• Increased illness
• Social disruption and panic
• Collapse of regular heath care systems
• Health workers at high-risk of contracting the diseases
• Health workers may run away from health units
General Response Interventions

• Farmers should report incidents to animal health and human health workers

• Provisional Quarantine of affected area if necessary

• Confirm the occurrence of the outbreak and notify authorities
General Response Interventions

• Activate the Rapid Response Team (RRT) (Vet, Health, leaders, Police, etc)

• Identify source of infection and

• Identify the severity of the infection and extent of spread

• Set up immediate control measures
General Response Interventions

• Dispose of dead animals in safe ways (Burn and/or Bury)

• Quarantine the sick and suspected and observe general conditions

• Stop movement of animals

• Vaccinate where necessary
Animal Welfare

• In outbreak situations, animal welfare situations should be taken into consideration

• Even if they are to be destroyed or killed, they should be treated in a humane manner
  – Reduce undue pain
  – Confine them in a considerate manner
The End!
