Use + Share + Adapt

{ Content the copyright holder, author, or law permits you to use, share and adapt. }

Ø PD-GOV	Public Domain – Government: Works that are produced by the U.S. Government. (17 USC § 105)
PD-EXP	Public Domain – Expired: Works that are no longer protected due to an expired copyright term.
PD-SELF	Public Domain – Self Dedicated: Works that a copyright holder has dedicated to the public domain.
(cc) ZERO	Creative Commons – Zero Waiver
СС ВҮ	Creative Commons – Attribution License
CC BY-SA	Creative Commons – Attribution Share Alike License
BY-NC	Creative Commons – Attribution Noncommercial License
BY-NC-SA	Creative Commons – Attribution Noncommercial Share Alike License
SNU-FDL	GNU – Free Documentation License

Make Your Own Assessment

{ Content Open.Michigan believes can be used, shared, and adapted because it is ineligible for copyright. }

Public Domain – Ineligible: Works that are ineligible for copyright protection in the U.S. (17 USC § 102(b)) *laws in your jurisdiction may differ

{ Content Open.Michigan has used under a Fair Use determination. }

Fair Use: Use of works that is determined to be Fair consistent with the U.S. Copyright Act. (17 USC § 107) *laws in your jurisdiction may differ

Our determination **DOES NOT** mean that all uses of this 3rd-party content are Fair Uses and we **DO NOT** guarantee that your use of the content is Fair.

To use this content you should do your own independent analysis to determine whether or not your use will be Fair.

Floods and Landslides

Background & Nature of Floods

FLASH FLOODS

- Rapid onset
 - Rain
 - Structural failure
- Brief duration
- Steep terrains, canyons
- Little or no warning

The Advocacy Project, flickr

Background & Nature of Floods

- RIVER FLOODS
 - -SLOW onset
 - -LONG duration
 - -Concave terrains
 - -Some warning

(CC) BY-NC-SA

The Humanitarian Coalition, flickr

Scope & Relative Importance of Floods

- Floods account for 40% of all world disasters
- Floods cause the most damage worldwide
- During 160 floods worldwide between 1980-1985:
 - 120 thousand were killed
 - 20 million left homeless

Most Lethal Floods

- Most lethal floods in modern history
 - 1887: 2 million dead
 - 1931: 4 million dead
 - 1938: 1 million dead

In Uganda

- Floods are an emerging public health problem in the region
- Every year, floods affect more and more people in different localities
- Closely associated with heavy rains (natural) and human settlement patterns (technological)

Uganda

- Bududa (2010)
- Butalejja (2010)
- Kisoro (2010)
- Soroti (2007)
- Kumi (2007)
- Kampala (Every Year)
- Landslides can be predicted and risk reduction and mitigation activities can be initiated

Factors that Contribute to Floods

• **Topographical makeup** – (e.g. Kyoga, Aswa floodplains)

May accompany other disasters

- Heavy rains and river surges
- Breakdown of river embankments
- Hurricane sea surges
- Earthquake-related tsunamis
- Landslides or volcanic eruptions

BY-NC-SA The Humanitarian Coalition, flickr

Factors that Affect Flood Occurrence & Severity

Natural factors

– Geological

- Soil character
- Eruptions

– Seasonal variation

• I.E.... Monsoon, Prevailing winds

– Climatic factors

• I.E... El nino

Topographical factors

- Incline
- Basins & canyons

Human factors

- Urbanization
- Deforestation
- Over-grazing
- Improper construction
- Inadequate safeguards

Flood-Related Mortality

- Most deaths occur in <u>flash floods</u>
- Most deaths are due to <u>drowning</u>
- Death rates vary according to country, rate of onset and community resilience

Public Health Impact of Floods

- Medical & public health needs can persist for many months after river floods.
- Normal health care delivery is disrupted
- Chronic illness is worsened long term
- Serious infectious diseases rarely increase
- Food & water shortages often develop

Key Health & Safety Response Issues After Floods

- Water quality
- Food safety
- Cleanup activity safety
- Sanitation & hygiene
- Disease vectors: insects, rodents, wild animals
- Chemical hazards
- Mental health for responders & victims
- Temporary settlement
- Early warning for subsequent floods

Aust Defence Force, flickr

Outreach support After Floods

- Not all victims can seek help
 - Geographical limits
 - Monetary limits
 - Disability
- Prevent convergence on limited resources
- Set up search and rescue efforts
- Set up immediate relief efforts
- Enhance surveillance & situational awareness

Prevention & Control Measures for Floods

- Mitigation
- Surveillance and early warning (Measurements that predict)
- Rapid Needs Assessment
- Mechanisms for Search and Rescue
- Mechanisms for immediate control of water surges
- Public information
- Floodplain management
- Responsible management of human settlements

Landslides

Introduction

- In Uganda, landslides are a focal problem in areas that are have topographic risk
- Due to population pressures and land-use implications, people are moving higher and higher into high risk areas
- Landslides can be predicted and risk reduction and mitigation activities can be initiated

Secondary Disasters Caused by Landslides

- Fires & explosions
- Building collapse
- Dam failures & floods
- Release of toxic materials

CC) BY-NC

Contributing Natural Factors

- Geophysical factors
- Topographic factors
- Meteorological factors

Contributing Human-Made Factors

- Structural Factors
 - -Types of houses
 - –Land-use patterns, demography, and population pressures

Health Impact

Immediate

- Minor injuries, lacerations
- Crush injuries to head & chest
- Hemorrhage & hypovolemia
- Asphyxia, drowning
- Burns
- Delayed
 - Dehydration
 - Environmental exposure
 - Crush syndrome
 - Wound infection & sepsis
 - Smoke & dust inhalation

Health Impact

 Landslides do not often create significant outbreaks of new infectious diseases

Prevention & Control Measures

- Avoid construction in areas of high geological risk
- Safer construction
- Drills, Scenarios & Planning
- Planning for displaced populations (SPHERE)
- Planning for emergency services
- Search & Rescue

Saving Lives

- Landslides have potential to cause MCIs
- Rapid assessment of impact
- Timely & appropriate disaster response
- Surveillance for injuries & diseases
- Dissemination of public health information
- Environmental health & control measures
- Follow up epidemiology
