Session 9: Managing Change 2: Leading Change
Managing Change

• Effectively addressing an important organizational challenge almost always means that something in the organization must change.

• Sometimes the changes are small e.g. change in a procedure, a rule, the way work is organized, or in how people interact with colleagues, subordinates, or clients.

• Sometimes the changes are larger and require a shift in priorities and strategies or a change in the services and products offered by the organization.
Change creates unexpected consequences in the organization

• A leader's task is to systematically plan for the change by initiating, organizing, managing, and monitoring the change process.

• Leaders need to be familiar with the behaviors, methods, and techniques for successfully introducing change and anticipate the consequences.

• Successful management of change includes creating conditions (climate, rewards, encouragement, inspiration, resources) that encourage stakeholders to get involved.

• All of these changes alter the usual ways of working, and sometimes the prevailing patterns of power; leading change is not for the ‘faint hearted’
Human Reactions to Change

• If we look at the changes over the last 200 years, it is remarkable how good we are as human beings in adapting to change.
• Some changes have made life better and others have made it worse
• When people perceive a change as bad, they tend to push back.
• This resistance can take various forms: passive resistance, active resistance, sabotage, or lethargy (indifference)
• In organizations we call all this “resistance to change”;
• Between organizations, or even nations, we may call this competition or even war.
Human Reactions to Change

• One thing we can learn from history is that most human beings resist being changed.
• If the initiators take pains to involve, listen to, and empower people in the process, outcomes almost always are different from when the initiators impose the change.
• Rather than saying “people resist change,” it is much more practical to say “people resist being changed,”
• Change is a phenomenon that, in itself, is neither good nor bad. It is our reaction to change that gives it a value and that leads to either cooperation or resistance.
Human Reactions to Change

- Our first reactions are influenced by what we think we will gain or lose:
- If the initiators engage us in conversations, public debate, negotiation and we feel that our views are being listened to, we may eventually change our minds.
- If we do not feel listened to we tend to respond to change by digging in our heels, by sabotaging, or disengaging altogether.
Leading Change: Common errors in change initiatives

- Allowing too much complacency
- Failing to create a sufficiently powerful guiding coalition
- Underestimating the power of vision or under communicating the vision
- Permitting obstacles to obscure the new vision;
- Failing to create short-term wins or declaring victory too soon;
- Neglecting to anchor changes firmly in the corporate culture.
- The problem with failed change initiatives is not only wasted time and other resources, but, more importantly, the wasted good will of employees
- Failed change creates cynicism, and cynicism acts like a virus in an organization: it spreads rapidly and makes future change initiatives less likely to be embraced
Leading Change: Eight stages of change

• Kotter proposes a sequence of eight stages when initiating any change
• Each is intended to keep one of the eight errors above from occurring
• The following is a description of Kotter's eight stages:
Eight stages of change

• 1. Establishing a Sense of Urgency
  – We need to communicate that the need for change is unavoidable.

• 2. Creating the Guiding Coalition
  – Which allies should be included in such a guiding coalition?

• 3. Developing a Vision and Strategy
  – Generate a point of reference in the future.
Eight stages of change

• 4. Communicating the Change Vision
  – Articulating the vision and strategy is important, but not sufficient.

• 5. Empowering Broad-Based Action
  – People are energized and they take initiative, risks and innovate

• 6. Generating Short-Term Wins
  – People need concrete reinforcement through some tangible short-term wins
Eight stages of change

• 7. Consolidating Gains and Producing More Change
  – We build on current gains to create more change and sustain the innovations

• 8. Anchoring New Approaches in the Culture
  – The have to cultivate the new change as a culture or norm of the organisation
